Using big data to understand ecosystems and policy impacts

Juan Mateos-Garcia

Innovation and Growth Lab Global Summit

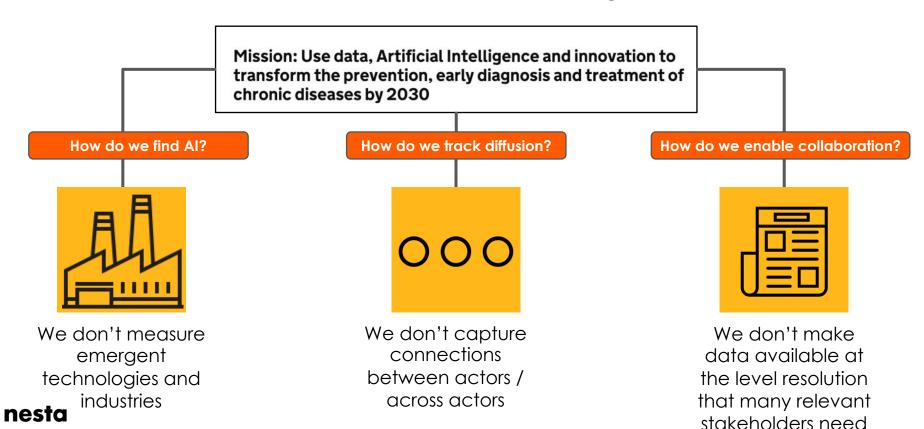

Berlin, 22 May 2019

nesta

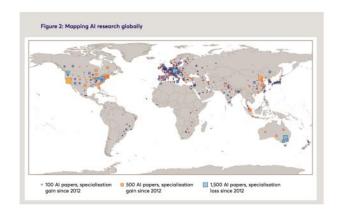

1. The innovation policy data challenge

We need new data for new innovation & growth policies

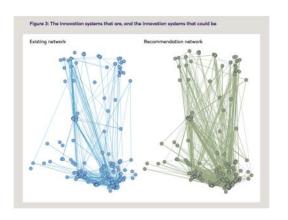

1. The innovation policy data opportunity

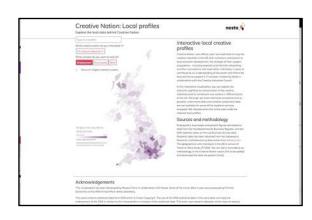

Novel data sources and methods could give us new, policyrelevant evidence for innovation & growth policy

Map and monitor emerging technologies

Analyse the structure of innovation systems

Release the data for anyone to analyse

But these novel methods also have risks: biases, consistency, interpretability, policy relevance, ethical problems...

Interdisciplinary team with a mission to transform innovation policy with new sources of data and analytics methods.

Develop tools, policy reports and recommendations, data, code and papers.

Arloesiadur.

Robert Wood Johnson Foundation

Today's session

Show the value of novel data & methods across the policy cycle

Show the potential of creative combinations: when older approaches and new ones come together.

Discuss policy applications & pathways and hurdles to implementation

Agenda setting

Predictive analysis of patent breakthroughs

Monitoring

Combining web data & innovation surveys to map innovation

Impact evaluation

Using network science & interviews to measure funding impacts
